Case Study.

Cancer Treatment Follow-up App

Background

A global digital technology consulting and software delivery partner targeting the healthcare industry. They are software-natives with a fierce entrepreneurial spirit and decades of experience in digital innovation and disruptive technologies.

Challenges

The client wanted to improve the turnaround time in releasing new versions of their health care industry oriented software applications without sacrificing testing coverage to ensure the release of new stable versions.

Business Objetives

Reduce release times of new versions while ensuring their reliability, with a focus on **improving the user navigation experience.**

Solution

Automated tests were developed and implemented in the most critical software products aligned with a regression testing plan agreed with the Product Owner of each application.

Results

- We were able to implement an automated testing practice improving time and reliability in the launching of new versions of their software products.
