Our Clients

Our Tech Domain

Customized service portfolio for Healthcare & life sciences industry.

Pharmacovigilance

Follow up on your patient's health in real-time, ensuring a safe prescription of your products

Safety and Compliance

Ensure that your processes, applications and services meet the highest quality and safety standards in the industry

Customer Service

Manage your medical care process from start to finish, understanding your requirements in order to anticipate them

Big data

Process big volumes of information from different sources to make smarter business decisions.

Telehealth

Provide easier access to appointments and treatment for your patients through platforms

Tailored Solutions

Enhance your business operation applications and platforms with developments that adapt to your current and future needs.

Customized service portfolio for Insurance industry.

Fraud Detection

Identify transactions with a high probability of fraud through an overview of your customers and data analysis capabilities.

Online Procedures

Provide your policyholders with the ability to request and track various services offered by their company.

Payment Methods Integration

Enable your end users to conveniently perform transactions through their devices and digital platforms.

Claim Reporting

Enable your policyholders to report claims online, improving the company's response times and, therefore, the level of customer satisfaction.

Insurance Quote Generators

Make it easy for your end users to access information about policy costs, payment options, and even promotions, whether for existing policyholders or to attract new customers.

Tailored Solutions

Enhance your business operation applications and platforms with developments that adapt to your current and future needs.

Customized service portfolio for Information Technologies.

Quality assurance

Guarantee the quality of your developments, as well as the stability of your apps, through rigorous implementation of processes that minimize risks.

Digital asset optimization

Manage and optimize all your clients' applications and platforms, ensuring business continuity and improving service quality for end users.

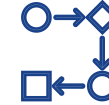

Business continuity

Maintain your company's operability both in the cloud and on physical servers thanks to our infrastructure management and support.

Consulting and innovation

Accelerate digital transformation and innovation through information technology software development and the adoption of agile technologies and methodologies that generate value at every point in the supply chain.

Product and platform development

Design custom applications that adapt to your business processes, complying with industry best practices and aligning with your company's objectives.

Dedicated teams

Boost your company's productivity by incorporating agile, self-managed teams specifically assembled to meet your business needs.

Case Studies.

Compliance Module for Sleep Therapy Management.

Solution.

A Compliance Module for Sleep Therapy Management ensures that patients in the USA receive the full benefits of their prescribed sleep therapy, while also offering healthcare providers and insurers a comprehensive solution for managing and monitoring compliance.

❖ **Technologies:** .Net Framework 4.8, React, MySQL, Oracle.

❖ **Engagement Model:** Dedicated Teams.

❖ **Service:** xxxxxx

❖ **Year:** 2022 – Ongoing.

 **Bonafide**

Case Study Overview.

Huenei led the development of a Compliance Module for Sleep Therapy Management designed to ensure compliance with the prescribed sleep therapy for patients in the US. The module provides management and monitoring capabilities for healthcare providers and insurers to monitor that patients complete the required 90-day treatment period as per their medical insurance coverage. Within the module, there are two main functionalities:

Outreach: Responsible for creating the logic for outreach via phone calls, emails, and SMS. It includes developing the business rules for these communication channels and designing the front-end interface for patients.

Dashboard: This includes providing data and analytics for insight generation and support for administrative tasks. For example, an overview of how many patients are currently undergoing treatment, and identifying those who may be at risk of non-compliance.

Web & Mobile Insurance Platform

Solution

Developed a Unified Digital Platform for web and mobile, integrating policy management, claims, payments, and quotations into a single, user-friendly solution that enables real-time updates across platforms, enhances customer self-service.

❖ **Technologies:** Angular, Ionic, Capacitor, NgRX

❖ **Engagement Model:** Dedicated Team

❖ **Year:** 2020 - Ongoing

Case Study Overview

Generali partnered with Huenei to create a Unified Digital Platform encompassing both web and mobile applications, designed to revolutionize customer experience and encourage self-management of insurance policies. The unified solution replaced the outdated web portal providing a responsive, scalable, and intuitive platform.

Key features include:

- Policy Management:** Customers can review their policies, download essential documents, and ensure compliance with insurance requirements.
- Claims and Payments:** Simplified workflows for filing claims, checking their status, and paying premiums.
- Service Accessibility:** Features like requesting roadside assistance, booking branch appointments, and accessing geolocation tools for finding nearby offices.
- Quotation Tools:** Prospective clients can calculate and compare coverage options for auto, home, and bicycle insurance.

As a result, Generali now offers a cutting-edge, fully responsive platform that improves client satisfaction, enhances usability, and empowers users to manage their insurance needs independently. This initiative also sets the foundation for scalability and rapid deployment of new functionalities, aligning with the company's long-term vision for innovation.
